I am a seasoned financial analyst with a mixed background in the architecture, design and development side of technology. I have skills in multiple languages across a diverse set of platforms providing versatility between the back and front-end of the application stack.

My primary academic focus has been creating rich HTML5/Javascript based applications and applying the latest CSS3 design standards. My passion is building clean, efficient, intuitive web applications for the device while striving to learn along the way.

### PROFESSIONAL EXPERIENCE

LA CROWN INC/SUNTECK tts Lagos.

(2015 – Present)

#### Web Application Developer

Job Description: I am now currently serving as one of web app application developer on the Mobile Development Team and am responsible for the Security Model service. Common Services (Web Api REST based SaaS) for mobile as well as Common service also (Web Api REST based SaaS) for the EHR platform. I have been a good contributor on Architectural initiatives 2years running which requires me to lead discussion after organizing and creating the standards by sourcing industry standards, coupled with best patterns and practices. This contributes to helping creating standards driven development and test driven development coding philosophies.

Zedflux Technologies Lagos.

(11-2013 – 10-2015)

#### Support Web Application Developer

Job Description: Main contributor and Team coordinator tasked with creating a complete and overarching coding standard as it applies to the company in terms of Microsoft development. It includes new direction and focus on creating standards based Service Oriented Architectures using the M.S. Web Api 2 framework and how standard based logging. Exception handling, Authentication and Authorization can allow for sustained and manageable growth as logistic software and hardware solutions company and encourage higher levels of cross functional development and usher in a homogeneously growing product line that can be used across several delivery platforms. My motivation for coding standard was to provide developer with a common services architecture and API for storage of internal and external facing resources to provide, clients, customers, and providers access to real time data across several delivery platform
